

## Billing Software

[Software](#) designed to handle time and billing tracking as well as invoicing customers for services and products. Billing software can track the hours worked by employees as well as expenses associated with projects or clients.

Most time and billing software [applications](#) also create billing cycle reports to display information such as hours worked, expenses incurred, how much to bill clients, and which clients owe money for specific projects

Below are the reasons you may need the Billing Software,

- To make your invoice / bill format fixed and neat.
- It looks professional, and error free.
- Invoice should have full description of that what your customer are been charged.
- To keep the accurate record of your customer and rates.
- To find out which of your customers are the most regular & profitable.
- To maintain the status of being paid or unpaid.
- To maintain payment details which is received from customer.
- To track the material receipts from supplier.
- To track the material present i.e. inventory in your company.
- To improve the efficiency of your office staff.

## Features

- Highly functional
- Cost effective
- Eases the work

Whether you're sending bills for your professional services, running a retail store, invoicing customers for repair work, or running an Internet business, we offer **Ray E-Bill** to simplify your billing and save your time and money. It can be easily operated. Off-line (VFD) systems are usually low cost products designed for a simple one or two user PC installation; they offer little or no protection against most supply problems and really only give support for short-term power loss. The load is fed from the mains during normal operation, hence 'off-line'. On-line (VFI) UPS systems are regarded as 'high-end' and employ more sophisticated technology which uses a rectifier and inverter, hence 'double-conversion'. This effectively isolates the load from virtually all types of power supply problems.
